Vacuum safely with Delfin's original filters

The filter is a critical part of the vacuum cleaner, as it provides the necessary protection to the turbine to work without being damaged by the aspirated material.

The material composition of the filter and the filter surface are adapted to the needs of aspiration, offering the highest quality and efficiency of filtration. Delfin provides filters with high and very high efficiency for the safe suction of each type of liquid and solid.

- Pocket filters of class H, M or L
- HEPA filters;
- Nomex filters;
- Anti-static filters;
- Activated carbon filters.
